for a large complex system the amount of test cases in a regression test suite can range from a few

hundred to several thousands which can take hours or even days to execute regression testing also requires considerable resources that are often not readily available this precludes their use in an interactive setting further contributing to an inefficient testing process cloud computing offers the use of virtualized hardware effectively unlimited storage and software services that can help reduce the execution time of large test suites in a cost effective manner the research presented by tilley and parveen leverages the resources provided by cloud computing infrastructure to facilitate the concurrent execution of test cases they introduce a decision framework called smart t to support migration of software testing to the cloud a distributed environment called hadoopunit for the concurrent execution of test cases in the cloud and a series of case studies illustrating the use of the framework and the environment experimental results indicate a significant reduction in test execution time is possible when compared with a typical sequential environment software testing in the cloud is a subject of high interest for advanced practitioners and academic researchers alike for advanced practitioners the issue of cloud computing and its impact on the field of software testing is becoming increasingly relevant for academic researchers this is a subject that is replete with interesting challenges there are so many open problems that graduate students will be busy for years to come to further disseminate results in this field the authors created a community of interest called software testing in the cloud stitc org and they encourage all readers to get involved in this exciting new area

smartphone users have come to expect high quality apps this has increased the importance of software testing in mobile software development unfortunately testing apps particularly the gui can be very time consuming exercising every user interface element and verifying transitions between different views of the app under test quickly becomes problematic for example execution of ios gui test suites using apple s ui automation framework can take an hour or more if the app s interface is complicated the longer it takes to run a test the less frequently the test can be run which in turn reduces software quality this book describes how to accelerate the testing process for ios apps using hadoopunit a distributed test execution environment that leverages the parallelism inherent in the hadoop platform hadoopunit was previously used to run unit and system tests in the cloud it has been modified to perform gui testing of ios apps on a small scale cluster a modest computing infrastructure available to almost every developer experimental results have shown that distributed test execution with hadoopunit can significantly outperform the test execution on a single machine even if the size of the cluster used for the execution is as small as two nodes this means that the approach described in this book could be adopted without a huge investment in it resources hadoopunit is a cost effective solution for reducing lengthy test execution times of system level gui testing of ios apps
